

## BANCTEC'S CENTERVISION DOCUMENT PROCESSING SOLUTION RAISES THE BAR—AGAIN

**DALLAS JUNE 15, 2010** – BancTec, a global provider of advanced, high-volume, document and payment processing solutions and services, has launched the latest version of its [CenterVision](#) transactional content management platform.

Updates extend CenterVision's control and processing capabilities to provide better **end-to-end tracking** of information, from when it enters the organization up to the relevant line of business processing. This capability, combined with **advanced service level agreement (SLA) monitoring**, places organizations in full control of their inbound information, ensures timely delivery of critical data to the appropriate business process, and reduces processing costs. Other updates include:

- **Full life-cycle management of inbound physical paper documents**, from receipt to registration, preparation, scanning, batching, storage and destruction. Better control of physical documents increases mailroom productivity, reduces operational costs, and improves client service. The life cycle management capability enables the registration, tracking and control of different levels in the hierarchy of document containers (i.e., boxes, folders, envelopes).
- **Support for Long Term Archiving (LTA) for future retrieval** of electronic documents, extracted data and performance statistics. Easily configurable with standard tools, LTA offers automatic control of the retention and destruction of relevant documents.
- **Straight through processing of electronic documents, faster exception processing and comprehensive, easy-to-set quality checking criteria.** These enhanced features reduce the cost and time to process transactional content, while still ensuring its overall quality and integrity.
- **Enhancements to knowledge worker and keying operator environments**, thus enhancing solution usability and user productivity. Configuration tools have also been updated with more options and better user interfaces to reduce customization and deployment time and effort.

"The concept of the digital mailroom has been around for many years, but there have been multiple obstacles preventing its widespread adoption," said Ralph Gammon, editor and publisher of the [Document Imaging Report](#). "With CenterVision, BancTec has addressed many of these challenges, and the product's ability to register, track, process and archive incoming mail streams will enable organizations to take better advantage of technological advances to improve their incoming mail operations. CenterVision's comprehensive set of capabilities will enable many mailrooms to make the jump into the 21<sup>st</sup> century."
