

INTELLISCAN® USC

IntelliScan is a next-generation document processing suite that redefines speed and produces superior, higher resolution images. IntelliScan offers unparalleled performance for a wide variety of business applications with its intelligent design, advanced technology, ease of operation, flexible configuration options and multiple speed/higher-resolution scanning capabilities. IntelliScan USC (Universal Scanner Control) software combines with IntelliScan XDS (eXtreme Document Scanner) to complete the solution suite.

IntelliScan USC

Forming the software core of the IntelliScan solution set is IntelliScan USC a completely new, fully integrated capture and transport control application.

Real-Time Document Identification

IntelliScan USC provides real-time identification and processing of documents. This dynamic feature allows scanned documents to be identified by type using barcode (1D and 2), true 313B MICR and OCR technology. Once a document type is associated to a form, decisions for inkjet print, sorting, capture settings, or item sequencing can be assigned. This technology saves an enormous amount of time from document preparation to capture.

Graphical Job Setup

IntelliScan USC includes a graphical user interface tool to create and edit job parameter files without the need to understand the format, structure or syntax. Users can easily configure jobs that image, read and classify documents to control sequencing, sorting and endorsements. The Job Setup tool can be used on the IntelliScan controller or as a standalone application on any PC workstation which means that job setup can be accomplished at remote locations. There is also a test simulator tool that allows administrators to ensure that new jobs function properly prior to handling live work.

Multiple Device Support

IntelliScan USC can operate on multiple devices which enables reuse of existing hardware, including smaller devices for lower volume locations. This flexibility is essential in today's environment. In addition to IntelliScan XDS, other supported capture devices include BancTec's full line of transports, the Axiome hem3310, TWAIN scanners, NCR transports and remote capture devices.

Features at a Glance

Intuitive, operator-friendly, graphical job setup and interface tools

Easy-to-learn controls and video-based assistance for quick implementation and training in less than a day

Latest "Vista" graphical user interface

Single or multi-page output image files in TIFF, JPEG and JPEG 2000 formats

Job setup and test simulation from remote PC

Support of other capture devices in addition to IntelliScan XDS, including BancTec's full line of transports, the Axiome hem3310, TWAIN compliant devices and more

Versatile Image Output

IntelliScan USC provides multiple choices for image output including single or multi-page output image files in TIFF, JPEG and JPEG 2000 formats.

Auto-Color Save

IntelliScan USC has incorporated an Auto-Color Save feature that identifies the presence of color images and saves these in JPEG format in color but saves your other documents such as forms in bitonal - reducing the amount of allocated space required.

Video-Based Help

IntelliScan USC provides videos to help operators easily learn job setup. Video-based help for subjects such as creating document types, defining OCR and barcode zones, managing pocket groups, and selecting color dropout makes implementation and operator training fast and simple.
